

Beth is our Chief Ceramist, and has developed a wide range of skills over her time here. Beth has great ability and a natural feel for shade, anatomy and morphology which allows her to create beautiful aesthetic and functional restorations.

Beth is responsible for the production of the majority of Private Ceramic restorations produced by the lab and has a special interest and talent for anterior 3 to 3 type cases, and veneer restorations.

Beth has demonstrated great artistic ability in many ceramic systems including traditional porcelain bonded (feldspatic) ceramics as well as newer systems such as e-max, (Lithium Disilicate) Procera (Alumina) and Lava (Zirconium).

Beth has recently turned her talents to implant supported restorations and has once again shown great passion for learning new procedures. Not just a Ceramist Beth can turn her hand to composite restorations with ease and whether it's a simple single unit or a more complex combination case the constant stream of glowing surgeon comment cards are a testament to her eye for detail and technical skills.

Beth has now been part of our team for 10 years.
