

Lee is the labs Implant expert and is involved at every stage of implant treatment. His expert knowledge and experience has been gained through many years of hard work and intense training. Lee is always striving to improve and add to his skills and regularly attends courses and seminars around the country by leading speakers in the field of implantology. Lee has also been instrumental in pushing computer guided implant placement forward and has built a reputation for the quality and accuracy of his guided surgery stents and drill guides ([more info available here](#)) Lee is a regular attendant at local as well as national ADI Meetings. Lee is also part of the CAD/CAM design team overseeing all CAD implant framework designs.

Lee also ensures the accurate fit of all other restorations due to his skill and accuracy in dye-trimming.

Lee is also involved in testing out new techniques and materials in the lab.

As well as being familiar with many different implant systems Lee is also a Straumann Platinum approved Technician and is tested every year by Straumann in order to keep up this status.

Lee is now taking an active interest in the labs Prosthetics department and is enrolled on the UCLAN CDT (Clinical Dental Technician) course.

Lee has over 23 years' experience and has been a driving force at the lab for over 15 years.
